CISC 856 Assignment 3 - Implementing and Analyzing TD Algorithms

elsayed elmandoua - 20596379

1. Tool Used

Tool	Purpose
Deepseek	Assistance and review only, code debugging suggestions, algorithm verification, config checks, report text editing (formatting, tables, structure)

2. How GenAI Was Used

2.1 Code Assistance (Review and Debugging Only)

File	Nature of Assistance
src/config/config.py	I asked GenAI to review it. It suggested using <code>pydantic.BaseModel</code> for cleaner type-safe fields. I reviewed the suggestion and applied it.
src/utils/rewards.py	GenAI pointed out unused parameters and missing imports after I asked for a code check. I cleaned them up.
app.py	Had a typo (<code>form</code> → <code>from</code>) and missing references to <code>Grid / Action / visualise_policy</code> . GenAI spotted these when I asked it to verify the file compiled.
notebooks/01-assignment-3.ipynb	I wrote all cells. GenAI suggested fixing one parameter name, and adding <code>plt.savefig</code> calls. I reviewed each change before applying.

2.2 Documentation

File	Nature of Assistance
requirements.txt	GenAI noted that <code>python-dotenv</code> was unused because it suggested using <code>pydantic.BaseModel</code> . I removed it after verifying.
README.md	I wrote the content. GenAI helped with formatting the project structure tree and results table.
docs/03-deliverables/01-report.pdf	I wrote the content. GenAI was used only after the fact to clean up Markdown formatting, and structure figure references.

3. Declaration

In accordance with Queen's University academic integrity policies and the course policy on gen AI tools:

1. I wrote and understand all algorithm code

GenAI was used only for debugging suggestions, and code review not for writing code

2. I wrote and own all analysis and ideas in the report

GenAI was used only for editing and formatting not for generating content

3. Every GenAI suggestion was reviewed before being applied. Nothing was accepted blindly
